SUMMARY

I am a Software Engineering student who is a lifelong learner and researcher aiming for a career in Java development. I am constantly improving myself in software architectures and design patterns to build robust systems. Additionally, I have a strong interest in the DevOps domain and actively conduct research on IT ethics and digital transformation, focusing on data privacy and the societal impacts of technology. My goal is to integrate modern development practices with a strong ethical responsibility to create secure and impactful software solutions.

EDUCATION

Bachelor of Science in Software Engineering, Kirklareli University

(Junior (3rd Year) Student -Expected Graduation: 2027)

PROJECT

Personal Portfolio Website

- A static web project with a minimalist aesthetic, showcasing projects along with technical details such as layered architecture and API integrations.

Eco-Trace Sustainability-Focused Product Analysis System

- Designed a smart backend system that fetches and processes real-time product data via Open Food Facts API integration.

Zanaatkar E-Commerce Frontend Project | HTML, CSS

- Utilized **HTML5** for structured content and **CSS3** for custom styling, ensuring a responsive and visually appealing layout.

Hotel Reservation and Customer Tracking System | Java, MySQL, XAMPP

- Developed a comprehensive desktop application to digitalize and streamline hotel reservation processes using **Java**.

Library Management System Automation | C#, MS SQL Server (SSMS), Visual Studio

- Engineered a multi-layered library management system using **C#** and **Windows Forms** for the Visual Programming course.

SKILLS

- **Programming Languages:** Java, C#, Python, JavaScript, HTML, CSS
- **Database Management:** MySQL, MS SQL Server, H2 Database
- **Architectures & Concepts:** Layered Architecture, API Integration (REST), Design Patterns, DevOps
